

SECTION B - ELECTRIC SERVICES

PART I - PERMITS

- 1.1 The first step is to fill out an application for electric service at the Logansport Municipal Utilities field office at 722 Bringhurst Street, Logansport, Indiana 46947. The personnel at the utilities office will assist you in completing the form so that all of the questions can be properly answered and a clear understanding of the request obtained.

To complete the application, you will need to know information about the location and type of development, service requirements and anticipated load as well as the timing of the project. The more information that can be supplied on the application, the better the department can assist you in your service request. The office will attempt to let you know when you first come in about how long it will take to provide service to your project. Depending upon the complexity and size of the development proposed, the office will attempt to get an estimate of cost to provide service to the project within a week of the application being made. The policy of LMU is that the owner/developer has two options concerning payment of the cost for extending/providing electric service:

1. The owner shall pay LMU 100% of the estimated cost for extending/providing service, including the related manpower, administration activities, equipment, and material for the electric service and be entitled to receive a reimbursement from LMU equal to 36 months of revenue from electric utility bill payments by owner for this location. The 36-month reimbursement time period begins at the time the electric service is in place and ready for use.
2. The owner shall pay LMU 35% of the estimated cost for extending/providing service, including the related manpower, administrative activities, equipment and material for the electrical service. LMU will pay any remaining costs, and the owner will not be eligible for any electric utility bill reimbursement.

Upgrade of services will be 100% of the total cost to the Utility, with the exception when the customer requires increased load for that location. The cost will be based on the change in the load on a per-project basis. There is a \$550 charge for residential services to be converted from overhead to underground.

On large projects with variable demand for power and uncertain future needs, additional information and meetings will be required to determine the estimated cost and schedule of the service. Many factors are involved in being able to determine the best method of providing electric service to commercial and industrial developments. The sooner you contact the utility office with your intentions for development, the more assistance and better service they can provide.
